3.3 EQUIVALENT ISOTROPIC RADIATED POWER

Test Overview

Radiated tests are performed in the Semi-anechoic chamber.

The equipment under test is placed on a non-conductive table 3-meters away from the receive antenna in accordance with ANSI/TIA-603-E-2016 Clause 2.2.17.

Test Settings

1. RBW = 1MHz
2. VBW = 3MHz
3. Span = 1.5 times the OBW
4. No. of sweep points > 2 x span / RBW
5. Detector = Peak
6. Trace mode = Max Hold
7. The trace was allowed to stabilize
8. Test channel : Low/ Middle/ High

Test Note

1. The EUT was tested in three orthogonal planes(X, Y, Z) and in all possible test configurations and positioning.
2. The worst case emissions are reported with the EUT positioning, modulations and axis configurations shown in the test data.

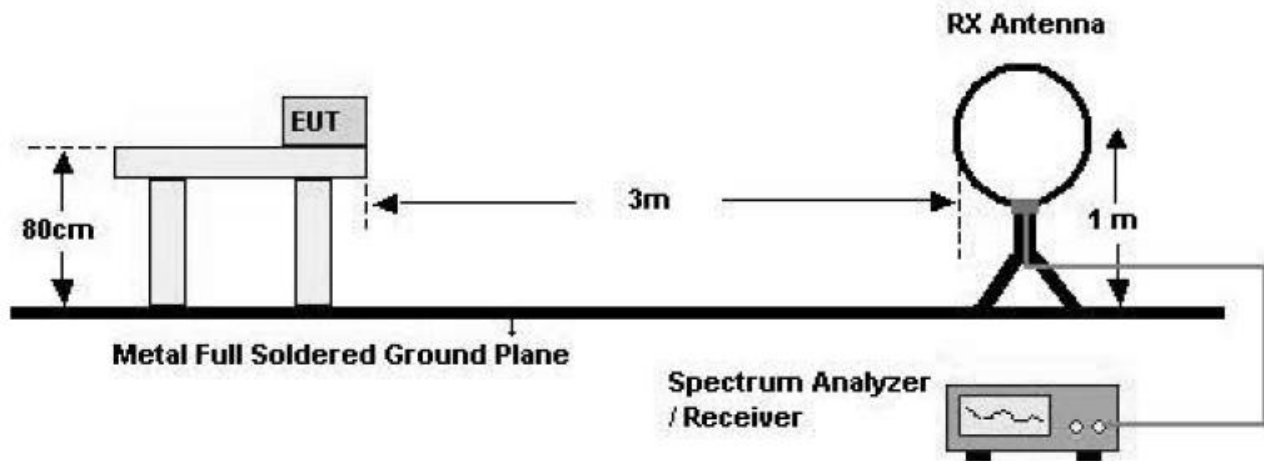

3.4 RADIATED SPURIOUS EMISSION

Test Overview

Radiated tests are performed in the Semi-anechoic chamber.

The EUT was demonstrated using the applicable measurement procedures of ETSI EN 300 422-1.

Below 30 MHz

30 MHz - 1 GHz

**Test Settings**

1. RBW = 9kHz to 30MHz : 10kHz
30 MHz to 1GHz : 100kHz
1MHz for emissions above 1GHz
2. VBW $\geq 3 \times$ RBW
3. No. of sweep points $> 2 \times$ span / RBW
4. Detector = Peak detector below 1 GHz and a RMS Average detector above 1 GHz
5. Trace mode = Max Hold
6. The trace was allowed to stabilize
7. Test channel : Low/ Middle/ High

Test Note

1. Measurements value show only up to 3 maximum emissions noted, or would be lesser if no specific emissions from the EUT are recorded (ie: margin > 20 dB from the applicable limit) and considered that's already beyond the background noise floor.
2. The EUT was tested in three orthogonal planes(X, Y, Z) and in all possible test configurations and positioning.
The worst case emissions are reported with the EUT positioning, modulations and axis configurations shown in the test data.
3. The EUT was demonstrated using a Peak detector below 1 GHz and a RMS Average detector above 1 GHz.
4. The EUT was investigated up to the 10th harmonic of the fundamental.

3.5 OCCUPIED BANDWIDTH

Test setup

According to ANSI C63.10-2013 section 6.9 for additional Test Set-Up procedures, the occupied bandwidth of emission was measured with a Spectrum Analyzer connected to the antenna terminal while EUT was operating in 2.5kHz tone at an input level 16 dB greater than that necessary to produce 50 percent modulation. Then mark the -26dB Bandwidth and record it.

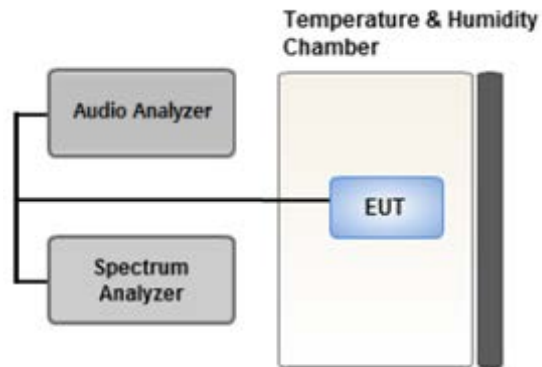

Test Settings

1. The signal analyzer's automatic bandwidth measurement capability was used to perform the 99% occupied bandwidth and the 26dB bandwidth. The bandwidth measurement was not influenced by any intermediate power nulls in the fundamental emission.
2. RBW = 1 – 5% of the expected OBW
3. VBW $\geq 3 \times$ RBW
4. Detector = Peak
5. Trace mode = max hold
6. Sweep = auto couple
7. The trace was allowed to stabilize

3.6 EMISSION MASK

Test Overview

The EUT was demonstrated using the applicable measurement procedures of ETSI EN 300 422-1.

Test setup

Test Settings

1. Centre frequency: f_c : Transmitter (Tx) nominal frequency
2. Dispersion (Span): $f_c - 1\text{ MHz}$ to $f_c + 1\text{ MHz}$
3. Resolution BandWidth (RBW): 1 kHz
4. Video BandWidth (VBW): 1 kHz
5. Detector: Peak
6. Trace mode = max hold

Test Note

1. Audio limiting threshold: 50mV(Declared by the manufacturer)

3.7 FREQUENCY STABILITY

Test Overview

Frequency stability testing is performed in accordance with the guidelines of ANSI C63.10-2013.

Test setup

Test Settings

1. Temperature:

The temperature is varied from -20°C to +50°C in 10°C increments using an environmental chamber.

2. Primary Supply Voltage:

85% to 115% of the rated supply voltage at a temperature of 20 degrees C.

3. Set frequency counter center frequency to the right frequency needs to be measured.

Test Note

1. Battery operated equipment shall be tested using a new battery.
